### What are the risks of investing?

#### Risk indicator for the Global Bond ETF Fund <sup>1</sup>

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the fund's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

To help you clarify your own attitude to risk, you can seek financial advice or work out your risk profile at <https://www.sorted.org.nz/tools/investor-kickstarter>

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

This risk indicator is not a guarantee of a fund's future performance. The risk indicator is based on the returns data for 5 years to 31 December 2016. While risk indicators are usually relatively stable, they do shift from time to time. The risk indicator will continue to be updated in future fund updates.

### Other specific risks

There are other risks that may increase the risk to returns for investors, which are not reflected in the risk indicator. These risks include active management risk. In particular, the investment manager for the fund buys and sells financial products based on its own assessment of what is happening in the market. There is a risk that the investment manager selects investments that result in the fund achieving a return that is lower than the investment objective for the fund.

See the “Other Information – Risks” document on the offer register at [www.business.govt.nz/disclose](http://www.business.govt.nz/disclose) for further information.
